ENHANCING HEALTH DATA THROUGH DATA INTEGRATION

VISITS
Analyze diagnoses and chronic conditions in health records, linking to Census data to connect patient, family, clinician, and community characteristics.

PATIENTS
Leverage partnerships to acquire health records and link them to Census data, attaching demographic and economic characteristics to patients, families, and communities.

CLINICIANS
Use a national registry of physicians and other clinicians, attaching characteristics from demographic, business, and tax data.

POPULATION
Provide population-wide denominators to assess patient selection, generalize findings, and evaluate clinician availability relative to community needs.

FACILITIES
Observe industry, payroll, geography, legal structure, and ownership. Use IRS tax and Census business data to identify clinician places of service.
